# LATEX: An Introduction (Part 1) University Graduate College Training Course

Dr Martin Chorley

School of Computer Science & Informatics, Cardiff University

February 10th, 2013

Notes			

### Introduction

- ► What, Where and How of LATEX
- ► Writing LATEX files
- ▶ Document Classes & Structure
- ▶ Packages
- ► Sections & Chapters
- ► Text Formatting
- ► Tables
- ► Lists
- $\blacktriangleright$  Graphics, Images & Figures in LATEX
- ► Maths
  - ► Typesetting Maths
  - ► Equations

Martin Chorley (COMSC)

IATEX: An Introduction (Part 1)

)/02/13 2 /

Notes			

# Not Covered

- ► Floating Environments
- $\blacktriangleright$  Referencing & Bibliographies using BIBTEX
- ► Complex commands
- ► Customising environments & commands
- ► Presentations in LATEX

All covered in 'LATEX: An Introduction (Part 2)' –  $21^{st}$  February, 2014.

Martin Chorley (COMSC)

IATEX: An Introduction (Part 1)

10/02/13 3 / 84

# 

Notes

# What is LATEX?

 $T_{E\!X}$  is software developed by Donald Knuth for typesetting documents.

- ▶ low level markup language and compiler
- ▶ very powerful, but difficult to use

 $\label{eq:expectation} \LaTeX \ \text{is a collection of software built around TeX to make life easier}$ 

- ▶ macros and scripts to convert LATEX commands to TEX
- ▶ many packages for doing complex formatting/layouts

٨	/lartin	Chorley	(COMSC

IAT<sub>E</sub>X: An Introduction (Part 1)

10/02/13 5 / 84

Notes			

# Why LATEX?

- Allows you to concentrate on content and structure, rather than layout and presentation
- ▶ Keeps formatting consistent throughout the document
- $\blacktriangleright$  No design or typography knowledge required
- ▶ Excellent for writing mathematical expressions or equations
- ▶ Long and complex documents can be created easily
- ► Free!

# Why not LATEX? Notes ► Can't easily see how document looks as we write it ▶ Need to learn LATEX to be able to create anything ▶ Lose some control over formatting and layout $\blacktriangleright$ LATEX is not the prettiest or simplest language out there Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 7 / 84 Where do we get LATEX? Notes LATEX is freely available from a number of different sources. There are many different implementations and collections of packages online. Windows proTeXt is a good solution for Windows, providing MiKteX (a set of LATEX packages and package manager for Windows) along with a decent editor: TeXnicCenter Mac OSX MacTeX provides TeXLive (a set of LATEX packages and package manager) along with a number of different editors and utilities. Linux Most distributions will come with LATEX ready installed but if not you can install TeXLive. Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 8 / 84

# How do we use LATEX? Creating documents with LATEX is simple: 1. Write our document as plain text in a '.tex' file, using LATEX commands to structure and format it 2. Compile our '.tex' file to produce the output

Votes			

First (basic) LATEX Example	Notes
\documentclass{article} \begin{document} Hello World! \end{document}  Hello World!  Martin Chorley (COMSC)  WTeX: An Introduction (Part 1)  10/02/13  10 / 84	
Writing LATEX – Whitespace Whitespace (spaces or tabs) are all seen as a 'space' by LATEX. Several	Notes
concurrent spaces are all seen as one space only. Any whitespace at the beginning of a line will be ignored, and a blank line is needed between two lines of text for them to be considered separate paragraphs.	
If I add multiple spaces between words \LaTeX\ will treat them as one space. This will not start a new paragraph.	
This is a new paragraph.	
If I add multiple spaces between words LATEX will treat them as one space. This will not start a new paragraph.  This is a new paragraph.	
Martin Chorley (COMSC) IATEX: An Introduction (Part 1) 10/02/13 11 / 84	
Writing LATEX – Reserved Characters	Notes
LATEX uses a number of characters that have a special meaning as part of the language, so care must be taken when using these in .tex files. They will either not be displayed, or can cause LATEX to do something differently.	
\# \\$ \^{} \& \_ \{ \} \~{}  \%	
# \$ ^ & _ { } ~ \ %	
To use these in normal text, add a \ before them. The exception to this	
rule is when using a \ itself, as LaTeX uses \\ to start a new line. If you want to use a backslash in normal text, use the \textbackslash	

command.

Martin Chorley (COMSC)

LATEX: An Introduction (Part 1)

10/02/13 12 / 84

Writing LATEX – Commands		
LATEX commands have an effect on the text in the document. commands have additional arguments or optional parameters. syntax for a LATEX command is:		eral
\commandname[opt1, opt2,]{arg1}{arg2}		
Martin Chorley (COMSC) IATeX: An Introduction (Part 1)	10/02/13	13 / 84
. , ()	.,.,.	.,

Notes

# Writing LATEX - Commands & Whitespace

Whitespace after LATEX commands will generally be ignored. If you need a space after a command, you can either add an empty parameter to the command, or use a (breaking or non-breaking) space command.

\LaTeX commands will ignore whitespace after them.\newline We can force a space after a \LaTeX{} command using an empty parameter. \\

Or we can use a space command (texttt{\ } or \texttt{~} )after our \LaTeX\ command.

This way our \LaTeX~commands and text do not flow together!

LATEX commands will ignore whitespace after them.

We can force a space after a LATEX command using an empty parameter. Or we can use a space command (texttt or ) after our LATEX command. This way our LATEX commands and text do not flow together!

Martin Chorley (COMSC)

IATEX: An Introduction (Part 1)

10/02/13 14 / 84

Notes

Notes			

Writing	PLEX -	Switches

Most LATEX commands have a switch equivalent, which have no arguments but apply to all of the current scope.

\texttt{some text in typewriter font}, some text in normal font
{\tt some text in typewriter font}, some text in normal font

some text in typewriter font, some text in normal font some text in typewriter font, some text in normal font

Be careful with switches. If you use them incorrectly, you can end up applying them to the whole document!

Martin Chorley (COMSC)

IATEX: An Introduction (Part 1)

10/02/13 15 / 84

# Writing LATEX - Groups

You can restrict the effect of LATEX commands or switches by using groups. A group is defined using a pair of braces.

```
Here is some text before a group
{
\it This text within the group is in italic
}
This text is not in italic as it is outside of the group
```

Here is some text before a group *This text within the group is in italic* This text is not in italic as it is outside of the group

Martin Chorley (COMSC)

IATEX: An Introduction (Part 1)

10/02/13 16 / 84

Notes

# Writing LATEX - Comments

The '%' character is used to create comments in LATEX. When LATEX is processing your .tex file and it comes across a '%', it ignores the rest of the line.

%This is a comment and will not be shown.

Here is some text in our file that will be shown. %but the rest of the line will not be.

We can even do things like br% eak words up with comm% ents if we want to.

Here is some text in our file that will be shown. We can even do things like break words up with comments if we want to.

Martin Chorley (COMSC)

LATEX: An Introduction (Part 1)

10/02/13 17 / 84

Notes

Notes			

### Compiling

That's more than you need to create a basic .tex file and create your first document.

To compile your .tex file and create your document, you use a  $\LaTeX$  compiler:

- $\blacktriangleright$  latex calls the tex compiler and outputs .dvi files
- $\,\blacktriangleright\,$  pdflatex calls the pdftex compiler and outputs .pdf files

Martin Chorley (COMSC)

LATEX: An Introduction (Part 1)

10/02/13 18 / 84

Compiling	Notes
Compiling creates a lot of extra files, including the output of your document. All of these files are recoverable and can be remade by re-compiling, so can be deleted safely.	
The only files you always need to keep and should not delete are .tex, .cls, .sty, .bib and .bst.	
Martin Chorley (COMSC)  LATEX: An Introduction (Part 1) 10/02/13 19 / 84	
Exercise 1	Notes
Have a go at creating your first LATEX document	

Martin Chorley	(COMSC)	LATEX: An Intro	oduction (Part 1)	10/02/13	20 / 84

Notes			

Document Structure
Every LATEX document must have a certain structure:
<pre>  \begin{document}</pre>
\end{document}
The area before \begin{document} is called the <i>preamble</i> . It contains commands concerning the setup of the document.
The text of your document is enclosed between the \begin{document} and \end{document}, within the 'document' environment.

10/02/13 21 / 84

Martin Chorley (COMSC) LATEX: An Introduction (Part 1)

Notes			

Environments	Notes
Environments enclose text and cause it to be treated a certain way, similar to commands. They usually have a larger scope than a command though. They begin with $\ensuremath{\texttt{begin}}{\ldots}$ and end with $\ensuremath{\texttt{end}}{\ldots}$	
<pre>\begin{document}   Here is some text   \begin{center}     Here is some centred text</pre>	
<pre>\end{center} \end{document}</pre>	
Here is some text	
Here is some centred text	
Martin Chorley (COMSC) $\arrowvert \Delta T_{\Bar{e}}$ X: An Introduction (Part 1) $\arrowvert 10/02/13$ $\arrowvert 22$ / 84	
Document Class	Notes
The  command tells LATEX which type of document we are creating, and how it should be set up and formatted. This	
command usually comes at the very beginning of the file.	
As with many commands it has optional parameters, which will change aspects of the structure, formatting or layout.	
\documentclass[opt1,opt2,]{class}	
Martin Chorley (COMSC) IATEX: An Introduction (Part 1) 10/02/13 23 / 84	
	•
Document Class	Notes
LATEX comes with many types of document class built in. Some of the most commonly used are:	
commonly used are.	
article for scientific articles, short reports, papers etc.  IEEEtran for articles in the IEEE Transactions format.	

Martin Chorley (COMSC)

beamer | for writing presentations

report

LATEX: An Introduction (Part 1)

report for longer reports containing chapters, small books, theses.
books for real books

10/02/13 24 / 84

		_
Document Class Parameters (1/2)		Notes
Common optional parameters for classes include:		
10pt, 11pt, 12pt   set the base font size for the document		
a4paper, letterpaper, . titlepage, notitlepag	ge report and book usually start a new page after the document title,	
	article does not.	
		-
Martin Chorley (COMSC)	: An Introduction (Part 1) 10/02/13 25 / 84	
Degument Class Bayanat	tors (2/2)	Notes
Document Class Paramet	.ers (2/2)	
onecolumn, twocolumn		
twoside, oneside	columns sets double sided or single sided out- put. article and report are single	
	sided and book is double sided by default	
landscape	changes the document to landscape rather than portrait	
	ome with documentation specifying which	
optional parameters they accep		
Martin Chorley (COMSC) IATEX	: An Introduction (Part 1) 10/02/13 26 / 84	
Document Class Example		Notes
So, to make a two-sided article in 12pt font on A4 paper, you can use the command:		
\documentclass[12pt,a4]	paper,twoside]{article}	

10/02/13 27 / 84

Martin Chorley (COMSC) LATEX: An Introduction (Part 1)

# **Packages** Often, the default set of commands available to LATEX cannot solve all of our problems alone. To include graphics, use coloured text or other complicated functionality you will need to include extra packages. These packages will often have extra optional parameters: \usepackage[opt1, opt2, ...]{packagename} So, for example, to use the package allowing us to use coloured text: \usepackage{color}

IATEX: An Introduction (Part 1)

10/02/13 28 / 84

Martin Chorley (COMSC)

Notes			
-			

# **Packages** We can include multiple packages in the $\usepackage\ command$ : \usepackage{color,graphicx,geometry} Any packages where we want to set optional parameters need to use their own \usepackage command: \usepackage{color,graphicx} \usepackage[margin=2cm]{geometry} Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 29 / 84

Notes			

# want to use, we can define information about the document in the top matter. \documentclass{article} \title{Document Title} \author{Me} \date{February 2013} \begin{document}

After we've specified the document class and included any packages we

Martin Chorley (COMSC)

\maketitle \end{document}

Top Matter

IATEX: An Introduction (Part 1)

10/02/13 30 / 84

### Abstract

Usually, scientific papers and reports will have an abstract, so  $\LaTeX$  includes an environment for specifying which part of your document is the abstract. article and report document classes can use the abstract environment.

Martin Chorley (COMSC)

LATEX: An Introduction (Part 1)

10/02/13 31 / 84

Notes

# Sections & Chapters

We often want to break documents into different parts, chapters or sections.

Command	Level
\part{part_title}	-1
\chapter{chapter_title}	0
\section{section_title}	1
\subsection{subsection_title}	2
\subsubsection{subsubsection_title}	3
\paragraph{paragraph_title}	4
\subparagraph{subparagraph_title}	5

Which section commands you can use depends on which document class you are using.

ou are using.

 Martin Chorley (COMSC)
 LATEX: An Introduction (Part 1)
 10/02/13
 32 / 84

Notes			

# Text Formatting

Martin Chorley (COMSC)

 $\Delta T_{\text{EX}}$  has many text formatting options included by default that allow you to change text size, style and spacing.

LATEX: An Introduction (Part 1)

10/02/13 33 / 84

# Text Size There are several commands for changing the font size, used as below: {\Large This text is large} \\ {\tiny This text is tiny} This text is large This text is tiny 10/02/13 34 / 84

Notes			

### Text Size

There are ten different options for specifying size:

- \tiny
- 2. \scriptsize
- \footnotesize
- 4. \small
- 5. \normalsize
- 6. \large
- 7. \Large
- 8. \LARGE
- 9. \huge
- 10. \Huge

Martin	Chorley	(COMSC)

LATEX: An Introduction (Part 1)

10/02/13 35 / 84

Notes			

## Text Font

The font can be adjusted simply in a few ways:

```
\textsf{Sans Serif font} \\
\texttt{Teletype font} \\
\textit{Italic} \\
\textft([tailc] \\
\textsc{Small Capitals} \\
\textbf{Bold} \\
\textrm{Roman font}
```

Sans Serif font Teletype font Italic Small Capitals Bold Roman font

Martin Chorley (COMSC) LATEX: An Introduction (Part 1)

10/02/13 36 / 84

# Text Font Each font command has a corresponding switch: Command Switch \textsf{...} {\sffamily ...} \textsi{...} {\ttfamily ...} \textit{...} {\itshape ...} \textsc{...} {\scshape ...} \textf{...} {\mathred{continuous} \textrm{...} {\mathred{continuous} 10/02/13 37 / 84

Notes			

Line Spacing			
LATEX has a built in comm	and for inter-line spacing:		
\linespread{factor}			
Use a factor of 1.3 for one spacing (the default line s	e and a half line spacing, and $1.6^{\circ}$ pacing factor is $1$ ).	for double	line
Martin Chorley (COMSC)	LATEX: An Introduction (Part 1)	10/02/13	38 / 84

Notes			
			_
			_
			_

commands and environm document or parts of the	nents for changing the line spac e document.	ing for the who	ole
For example, to change that lines:	the line spacing for the whole d	ocument to on	e and
setspackage\usepackag	ace}		
Martin Chorley (COMSC)	LATEX: An Introduction (Part 1)	10/02/13	39 / 84

The setspace package allows further control over line spacing, providing

Line Spacing - The setspace Package

			_

Text Emphasis	Notes
In order to emphasise text, use the \emph{text} command.	
We can \emph{emphasise} a word in the sentence.	
We can <i>emphasise</i> a word in the sentence.	
The $\mathbf{l}$ command is nice because it can be used within itself.	
Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 40 / 84	
	1
Quotation Marks	Notes
The " character is not used for quotation marks in LATEX. Instead, use two ' (grave accent) characters for the opening quotation mark, and two '	
(vertical quote) characters for the closing quotation mark. For single quotes, use one of each:	
The "double-quote" characters do not render as well as a	
combination of "grave accents" and "vertical quotes" when writing quotation marks.	
The "double-quote" characters do not render as well as a combination of "grave accents" and "vertical quotes" when writing quotation marks.	
Martin Chorley (COMSC)	
Hyphenation	Notes
In order to lay text out properly, LATEX will hyphenate words when	
necessary, to split them over multiple lines. If you find LATEX is hyphenating words in the wrong places, you can suggest the correct places to hyphenate a word using the \hyphenation{wo-rd-li-st} command:	
a word doing the thyphenacton(wo-ru-ri-st; command.	
\hyphenation{DISCUSSION Hy-phen-a-tion}	

10/02/13 42 / 84

Martin Chorley (COMSC)

LATEX: An Introduction (Part 1)

Hyphenation	Notes
If you don't want to list all words at the beginning of your document in a  command, you can add <i>suggested</i> hyphenation points to your text using \	
The village 'Llan\-fair\-pwll \-gwyn\-gyll\-go\-gerych\-	
gogerychwyrndrobwllllantysiliogogo- goch' has a very long name indeed, so we may want to suggest to LATEX how it might be hyphenated.  wyrnd\-rob\-wil\-llanty\- siliogo\-goch' has a very long name indeed, so we may want to suggest to \LaTeX\ how	
it might be hyphenated.	
This is useful for words with accented characters, as LATEX will not hyphenate these words by default.	
Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 43 / 84

Martin Chorley (COMSC)

IATEX: An Introduction (Part 1)

10/02/13

Exercise 3	Notes
Pull everything together to create a paper with sections and subsections, text formatting, lists and tables.	
Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 61 / 84	
Graphics	Notes
Including graphics in our LATEX document is relatively simple.	
The graphicx package allows us to use the \includegraphics command to read in an image from a file and insert it into our document.	
Often the hardest part is actually getting the image in the first place!	
Martin Chorley (COMSC)         IATeX: An Introduction (Part 1)         10/02/13         62 / 84	
Graphics - Raster vs Vector	Notes
Images can be stored in many ways within a file. Two common types of	
image are:	
Raster images stored as individual pixels within a file. Common raster image types include .jpg, .png, .gif  Vector graphics stored as a series of points, lines, curves, shapes and polygons. A common vector image type is .svg.	
.pdf and .eps files can contain both raster and vector image data within the same file.

Martin Chorley (COMSC)

LATEX: An Introduction (Part 1)

Notes			

Graphics - Supporte	ed files		
If you are using the lat Encapsulated PostScript	ex compiler, the only supported t: .eps files.	graphic type i	s
If you are using the pdf can be used.	latex compiler, .jpg, .png, .p	odf and .eps f	files
Martin Chorley (COMSC)	MTpX: An Introduction (Part 1)	10/02/13	65 / 84

Notes			

Graphics - insertion			
The \includegraphics command is used to insert an in ATEX document.	nage file into	your	
\includegraphics[opt1=val1,, ]{imagef	ile}		
The argument to the command is the filename of the image, relative to the folder in which the $\prescript{MTEX}$ is compiled.			
\includegraphics{img/rastervsvector}			
Martin Chorley (COMSC) LATEX: An Introduction (Part 1)	10/02/13	66 / 84	

Notes			

### Graphics - insertion

We usually supply the filename of the image without an extension, and allow  $\LaTeX$  to choose which file to use.  $\LaTeX$  will choose the best type of image depending on the compiler and output type.

You can specify which graphics types are to be used by including the  $\verb|\DeclareGraphicsExtensions| command in your preamble.$ 

\DeclareGraphicsExtensions{.pdf,.png,.jpg}

LATEX: An Introduction (Part 1)

10/02/13 67 / 84

# Notes

# \includegraphics - options

height=xx keepaspectratio scale=xx trim=l b r t clip

width=xx | Specify the preferred width of the image Specify the preferred height of the image True or False, affects behaviour when scaling Scale the image by the given factor angle=xx Rotate the image by the given number of degrees Crop the image Must be true for trim to work page=x | Select a particular page from a .pdf file

Martin Chorley (COMSC)

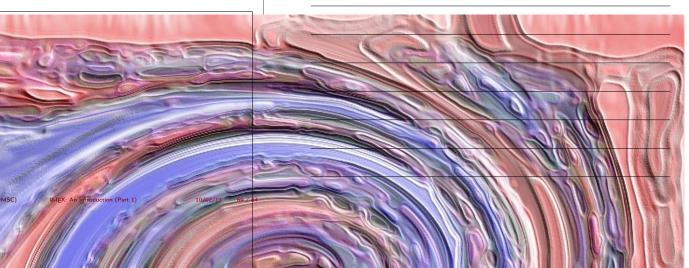

LATEX: An Introduction (Part 1)

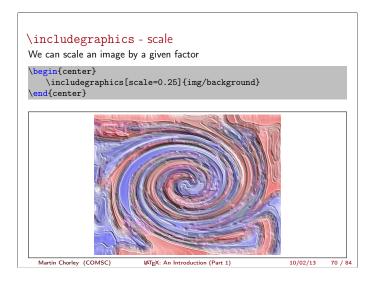

10/02/13

Notes

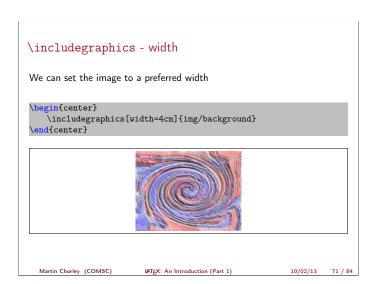

# \includegraphics - examples

\includegraphics{img/background}

Notes			

·	cs - height ge to a preferred height		
\begin{center}			
	[height=4cm] {img/background}		
\end{center}			
Martin Chorley (COMSC)	LATEX: An Introduction (Part 1)	10/02/13	72 / 84

Notes			

# \includegraphics - width and height Or we can set the image to a preferred height and width \begin{center} \includegraphics[width=4cm, height=2cm]{img/background} \end{center} Martin Chorley (COMSC) MTEX: An Introduction (Part 1) 10/02/13 73 / 84

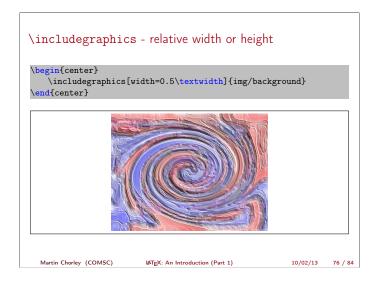

Notes			

# \includegraphics - width and height Or we can set the image to a preferred height and width, but maintain the aspect ratio. \[ \begin{center} \ \includegraphics[width=4cm, height=2cm, keepaspectratio=true] \{img/background}\\ \end{center} \] \[ \text{Martin Chorley (COMSC)} \text{MTgX: An Introduction (Part 1)} \text{10/02/13} \text{74/84}

Notes			

\includegraphics - relative width or height  We can set the image size relative to items in our environment such as the \linewidth, \textwidth or \textheight
<pre>\begin{center}   \includegraphics[width=\textwidth] {img/background} \end{center}</pre>
Macin Chaley (COMC)  Advanced Citing (Part 1)  10/02/59 352/84

Notes			

Notes		

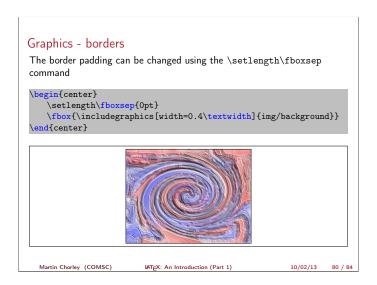

\includegraphi We can crop parts of	.cs - trim the image off the left, bottom, 1	right or top	
\begin{center}			
•	s[trim= 10mm 60mm 80mm 5mm, clbackground}	ip, width=0.	4\
Martin Chorley (COMSC)	LATEX: An Introduction (Part 1)	10/02/13	78 / 84

Notes			

# Graphics - borders The \fbox command can be used to put borders around things like pictures \begin{center} \fbox{\includegraphics[width=0.4\textwidth]{img/background}} \end{center} Martin Chorley (COMSC) Martin Chorley (COMSC) MATEX: An Introduction (Part 1) 10/02/13 79 / 84

Notes				

Graphics - border The border thickness command	S can be changed using the \setler	ngth\fboxrule	
<pre>\begin{center}   \setlength\fbox   \fbox{\includeg \end{center}</pre>	rule{4pt} raphics[width=0.4\textwidth]{i	mg/background}}	
Martin Chorley (COMSC)	IATEX: An Introduction (Part 1)	10/02/13 81	/ 84

Notes			

Exercise 4	Notes
Experiment with adding images into your documents.	
Martin Chorley (COMSC) LATEX: An Introduction (Part 1) 10/02/13 82 / 84	
	]
Help?	Notes
There are many, many places to get more help with LATEX.	
If you have a problem, use Google! Often that will lead you straight to the documentation for the package or command you have a problem with.	
Otherwise, StackExchange has a thriving T <sub>E</sub> X community where you can	
ask for help and advice:	
http://tex.stackexchange.com
